

Pole Star Platform

SSAS Management

Developed with and for CSOs and DPAs that require a SSAS management system that they can rely on when it is needed most.

In a security situation, rapid response is vital. So, when we developed SSAS Management, we designed every feature to make managing ship security alerts and tests simpler and quicker. We streamlined processes, reduced visual distractions and focused on what was important to you - ensuring your vessel and crew are safe.

The reliable web-based and mobile applications allow you to manage alerts and tests from your office, home or mobile, to give you confidence that, in the event of an incident, you are ready to respond immediately, no matter where you are.

Key Benefits

- Freedom to manage incidents anywhere, anytime, from any device
- Efficient fleet-wide SSAS management in a single system
- Simple online management of alert/test recipients
- Ideal for CSOs, DPAs, technical superintendents and other security personnel
- Control tests according to your business rules
- Instantly review operational efficiency with archive and reports
- Flexibility to create unlimited test and alert notification recipients
- Reduce OPEX by reducing the need for technicians
- Integrate Pole Star DSAS Mk2 and third-party SSAS hardware

SSAS alerts without the limits

Unlike some ship security alert systems that limit you to just three alert recipients or require a technician to go aboard to correct a misspelt email address, SSAS Management gives you control from the shore.

Create unlimited alert and test recipients on a per ship or fleet basis, edit recipients as often as required, select the notification format (email, SMS, fax or Telex) and verify delivery with notification status information, all within your Pole Star account. By removing the need for a technician to attend each time an edit is required, SSAS Management can save you valuable time and money while ensuring that the right people are notified as quickly as possible.

Manage alerts anywhere

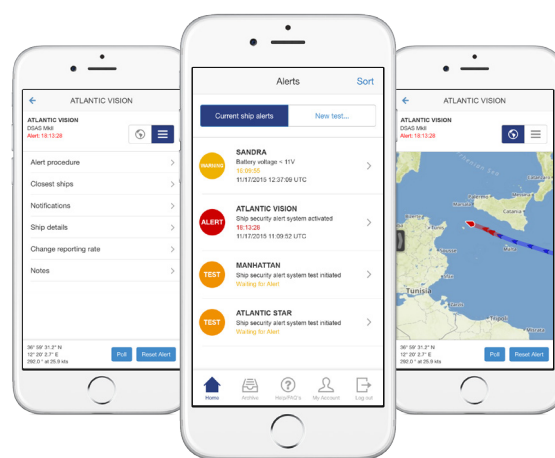

SSAS Management gives you the freedom to manage incidents, start tests and respond to alerts anywhere, anytime, from any device – on your desktop, laptop, tablet or smartphone.

Mobile & tablet

Designed to provide fast, easy access to essential features and functions. With the SSAS Management app for iOS and Android, you can be confident that, in the event of a security incident, you will be ready to respond immediately.

Desktop & laptop

A powerful web-based SSAS management application with a suite of advanced features that allow you to manage risks, improve operational efficiency and reduce operational expenses.

Make sure tasks are done

In the event of an incident, rapid response is vital. But equally important is avoiding panic and ensuring that safety and security procedures are executed properly.

The alert checklist supports a systematic approach to help minimise anxiety and maximise efficiency. With the alert procedure checklist, you can make sure key tasks are not forgotten.

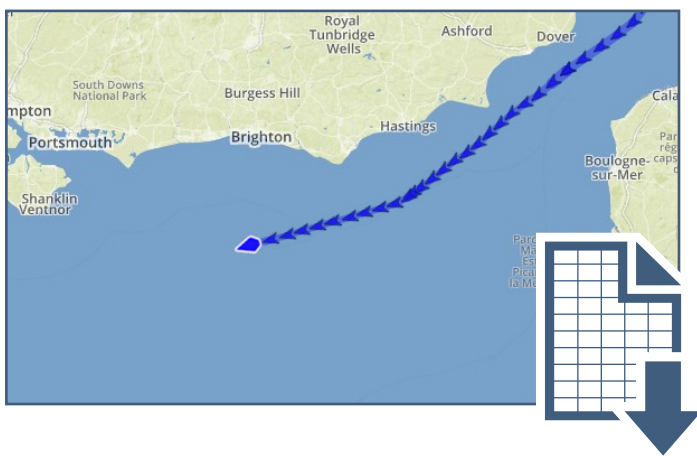

Take control of testing

CSO@yourcompany.com	<input checked="" type="checkbox"/>
shipmanager@yourcompany.com	<input checked="" type="checkbox"/>
flag@yourflag.com	<input type="checkbox"/>
SMS//:07123456789	<input checked="" type="checkbox"/>

With customised test profiles that reflect your business' testing procedures, you can be confident that test notifications are distributed according to your company's policies.

Demonstrate compliance

By providing a chronological record of your fleet's testing and alert activity, the archive helps you to demonstrate compliance, manage risk and improve security.

Demonstrate compliance

The archive can be used as proof of regulatory compliance during an inspection or survey and can help you fulfil record-keeping requirements for compliance purposes.

Risk management

The archive can play an important part in your overall risk management strategy, demonstrating to stakeholders and regulators your efforts to protect against and prevent potential problems before they occur. It can also help to protect you from liability during arbitration.

Increased security

By providing a chronological record of the sequence of events during an alert or test, the archive can help you proactively identify failures in procedure or areas for improvement.

SSAS Management hardware options

Because SSAS Management is compatible with Pole Star's DSAS as well as other manufacturers' Ship Security Alert Systems, you can manage security for your entire fleet in one account. By consolidating your fleet's security processes in just one system, you can reduce your costs and increase your operational efficiency.

DSAS Mk2

Premium, standalone, IsatData Pro SSAS solution that exceeds SOLAS requirements. Designed for the user who requires a SSAS they can rely on when it is needed most. Features 5-7 day battery backup, two alert buttons and hourly reporting.

Hardware integration

SSAS Management supports a wide range of third-party SSAS hardware from *Transas*, *Furuno*, *JRC*, *Cobham* and more. To see a comprehensive list of supported SSAS devices, please see the Hardware Integration brochure. If your fleet employs a unit not listed, please contact us.

Easy setup

1. Set up account

2. Install hardware

3. Free training

Features

Alert/test notifications

Create unlimited alert and test recipients on a per ship or fleet basis, add or edit recipients, select notification formats (email, SMS, fax or Telex) and verify delivery with notification status information, all within your Pole Star account.

Test alert profiles

Create customised test profiles that reflect your business' testing procedures.

Alert checklist

Create alert checklists to ensure that safety and security procedures are followed carefully in the event of an incident and key tasks are not forgotten.

Archive

A complete, chronological record of your fleet's testing and alert activity. Helps you demonstrate compliance, manage risk and improve security.

Closest ship

Instantly check which ships are nearby, so you can divert them towards or away from the incident.

Alert trails

Quick and easy overview of where and when an alert was triggered for enhanced situational awareness.

Web-based application

Access on any computer with a compatible browser, no software to download or install.

Mobile applications

The SSAS Management app for iOS and Android gives you the freedom to manage incidents anywhere, anytime.

Cloud-based web services

Our state-of-the-art, cloud-based web services ensure a secure, scalable and always-up-to-date system.

One account for everything

One account to manage all of your Pole Star services on the platform.

Hardware agnostic

The Pole Star platform is completely hardware agnostic. No supplier lock-in. No expensive fleet-wide hardware roll-out. A simple and consistent user experience, regardless of the hardware that is installed aboard the ship. SSAS Management is compatible with a wide variety of our own-brand and third-party Ship Security Alert Systems. Please contact us for the latest list.

Interactive maps

Big, interactive maps (including C-Map, terrain, street and satellite) with features including: zoom, pan, weather, zones and distance measurement tool.
